

BioAqua

High protein water and dead plankton causes bubbles. Apply DCD (DirectContactDigestion) System by spraying BioAqua liquid to dead plankton is the most effective system to clear up protein and dead plankton

BioAqua

A biological product to purify water and digest protein in water pond

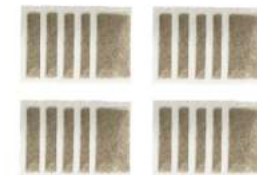

BioAqua

Powerful biological bacteria for cleaning pond water. Can reduce green plankton and water pH within 3 days.

Usage: put 20 tea bags into 5 litre drinking water bottle filled with water.

(Do not tear tea bag). Let it activate for 24 hours before applying to pond water.

1. To maintain good water management: apply 0.5 - 1 litre to 1,000 ton pond water daily.
2. For treatment: apply 5 litre per 5,000 ton pond water daily.
3. For water purification: apply 5 litre per 1,000 ton pond water once.

5 litre drinking water

BioAqua 20 sachets (1 pack)

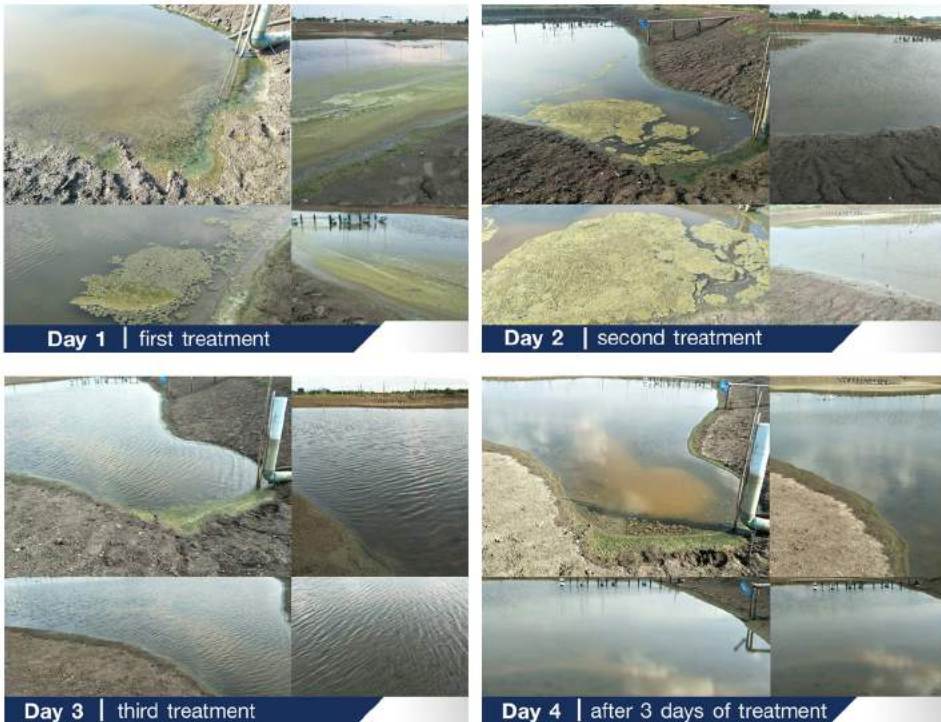

activate for 24 hours.

Excessive protein can cause many kinds of phytoplankton. When these excessive phytoplankton die off, they sink to bottom and turn to lab lab. These phytoplankton or dead plankton or lab lab will need oxygen to live or to digest themselves.

Before

After

Green water has high amount of phyto plankton which will cause high pH fluctuation between morning and late afternoon. This will cause big stress to your shrimps. More over the green plankton will absorb high amount of oxygen making low DO in water during night time.
